Topic 1 - Admin CRUD Clarification

Timestamp: 17 October 2022 9:35pm

Location: WhatsApp

Opened By: Marabel

Discussion:

Marabel clarifies if all admin CRUD functions will be ran on the same page. Marabel cites the example that if she is making a webpages for clubs, should she be able to add, update, edit and delete in the same webform. Gabriel responds yes.

Topic 2 - Raise Error & Previous Repository Update

Timestamp: 18 October 2022 9:34am

Location: WhatsApp

Opened By: Marabel

Discussion:

Marabel notes to Gabriel that that he misspelled a folder name. The folder name was suppose to be BLL (Business Logic Layer) but it was misspelled as BBL.

Gabriel acknowledges this mistake and notes that he will change the name in his folder first.

Marabel notes to everyone that she will clear out the previous repository (FreshmenGuideCode) and update it with the newly integrated one from Gabriel's repository. Marabel states that if anyone has immediate issues, they should message the group by 10:35am.

Gabriel and Henry acknowledges this.

Topic 3 - Questions about Project Webpage Direction

Timestamp: 19 October 2022 7:15am

Location: WhatsApp

Opened By: Marabel

Discussion:

Marabel asks Gabriel the following list of questions (word for word):

"For the form UI, I have the following questions:

- a) Are the text and field suppose to be on top of one another or side by side in one line?
- b) What kind of html are we using to display error messages? Eg. Alert box, field validator etc.
- c) What features are the GridView suppose to have? Eg. If I click on a row in the GV it shows the selected data in the form, the GV has edit and delete buttons etc.

Other questions I have:

- d) Can I confirm that the UI won't go through anymore major changes? Because it takes alot of time and effort to keep changing the code.
- e) Whose repository am I suppose to commit my updated codes to?"

Gabriel responds with the following (word for word):

"A) at first for admin page i wanna make it side by side however, due to bootstrap limitation, i cannot make it side by side

B) alert message can use validationexpression in c# or even alert box in aspx.cs(i think it depends on the situation so it can be flexible)

C) gridview in admin page supposed to have the data that is currently displayed and currently in db

D) i cannot promise this one since it might have another changes for animation,etc :
(

E) you can make your own repository first for cadangan (like second repository) or update it in university git (i advised you post it in two repository since it will be more safe)”

Gabriel adds on that he has done 40% his dal and bll. Gabriel also adds that he is still learning from the bookstop solution (reference from my previous project)

Marabel notes this with thanks and asks the following follow up questions (word for word):

“A) So is the final plan at the moment on top of one another? Or will it change again?

C) So how will editing and deleting data work?”

Gabriel responds with the following (word for word):

“A) yepp, that is like the final plan

B) i want to make it like yours or i watch the youtube like we can click the cell in gridview and then click the button”

Gabriel then shares the following youtube link as a reference:

<https://youtu.be/I5cWkoMeQIY>

Gabriel gives a brief explanation of the video.

Marabel notes this and states that she will follow this design for her code.

Gabriel asks Marabel which one she thinks is better. The video or her bookstop codes. Marabel responds that she thinks the video is better as there is less loading time and lesser pages hence easier to code. Gabriel notes this.

Topic 4 - Changes in Webpage Design

Timestamp: 19 October 2022 9:10am

Location: WhatsApp

Opened By: Marabel

Discussion:

Marabel states that the view in the video is complicated and will make the following changes for simplicity (word for word):

“1. Add Edit and Delete buttons for all rows in the gridview

2. Change the row of buttons to:

Default View: Add, Search

After selecting Edit in GV: Save, Cancel”

Marabel states that her envisioned UX experience for the admin is the following (word for word):

“1. Admin needs to update data

2. Admin goes to form and types in name of row to change

3. Admin clicks search

4. Admin sees gridview of data and can choose to edit or delete directly from the row

5. Admin clicks edit button in the GV

6. Admin types changes in form

7. Admin clicks save button

8. GV is refreshed to reflect changes

9. Admin satisfied”

Marabel states that her issue with the design in the video is that the admin will have to move their mouse up and down to complete this transaction hence it is unintuitive and takes up time. In addition, there is a higher chance the admin will accidentally click the wrong button.

Gabriel notes this and thanks Marabel for her input.

Topic 5 - Progress Update

Timestamp: 21 October 2022 9:27am

Location: WhatsApp

Opened By: Marabel

Discussion:

Marabel states that she has completed the admin pages for the Guide section. The team may refer to her webpage for the design layout.

Gabriel states that he has almost completed his as well but he is not confident in his code. Gabriel states that he will try to run the code tomorrow and thanks Marabel for her work.

Gabriel asks the other members for their progress. Ezra states that he has completed connecting to the database and is still trying to connect to the admin. Henry states that he has completed the admin page for seminar and have managed to run and load the data. Henry states that he followed the video so his design is similar to the video but will try to standardize on the design. Henry states that he is currently trying to code his seminar page so that it displays data from the database.

Topic 6 - Gabriel's GitHub Update

Timestamp: 22 October 2022 12:55pm

Location: WhatsApp

Opened By: Gabriel

Discussion:

Gabriel states that he failed to update his data to the database and that he will try again today.
